

PRESS INFORMATION FROM RPC BRAMLAGE WEST VELKY MEDER

RELEASE REF: RPC/2017/091

ISSUE DATE: 20th July 2017

CUSTOMER FOCUS AS VELKY MEDER EXPANDS

The opening of a new production hall at RPC Bramlage Velky Meder in Slovakia will provide enhanced support for the Bramlage division's customers in Eastern and Southern Europe.

The 2700m² area, which has doubled the size of the injection moulding production area, and the installation of new injection moulding equipment and assembly lines – an investment of around €4.2 million – will enable the company to produce a wider range of both bespoke and standard packs for key markets including beauty care and food, as well as specialist sectors such as building and household products.

In particular, the expanded facility will allow production of top-selling RPC Bramlage ranges including advanced dispensers and high-quality crème jars, with faster delivery to East and South Europe, thanks to Velky Meder's central European location.

"This is a significant development for our site and will be instrumental in driving our continued growth and success," comments RPC Velky Meder's General Manager Andreas Keller.
