

New test on LIPOMOIST 2036™ *molecular film* – Firming and remodeling effect

BARCELONA, FEBRUARY 2016 – Beautiful skin is a symbol of health and beauty, but with time skin starts showing the first signs of aging, which include dryness, loss of elasticity, and sagging. Lipotec's LIPOMOIST™ 2036 *molecular film* offers a perfect solution to combat these symptoms as it helps to improve hydration and firmness of the skin, along with a soft, light and pleasant sensation upon the application.

The new *in vivo* study performed on this molecular film also demonstrated its effectiveness in providing a remodeling effect. The test was performed on female volunteers between the ages of 35 and 55, showing signs of loss of elasticity and skin sagging, that applied a cream with 5% dosage on one side of the body and a placebo cream on the other, twice a day. After 28 days of treatment, the distance between the upper and lower part of gluteus decreased by 0.27 cm and a more elastic and compact skin was observed, providing an overall push-up effect in the gluteus.

LIPOMOIST™ 2036 *molecular film* helps to improve hydration and firmness, the secret for a beautiful skin.
